

PROJECT CASE STUDY

The access platform in front of the new wire rope rigging line

Here the perimeter guarding can be seen ahead of the access platform being completed

Brunton Shaw's impressive new manufacturing facility

Access platform and perimeter guarding for new rigging line

Location of project
Worksop, Nottinghamshire

Client
Brunton Shaw

Project overview
We manufactured and installed an access platform and perimeter guarding to Brunton Shaw's new wire rope rigging line, which is one of only four in the world with the capacity to manufacture 400 tonne (strength) wire ropes.

Project notes
This type of project demonstrates the cost and management benefits to clients when we're given responsibility for both machine guarding and access platforms.

Client feedback
Very pleased with both the guarding and access platform, plus the performance of the installation team.
