

AUTOMOTIVE INDUSTRY GUARDING

Application

Design, manufacture and installation of modular safety fencing, to prevent unauthorised access into a dangerous area. Guards are designed in compliance with BSEN953. Guard lines can be determined via a site measure or by over laying our guards onto customer CAD drawings for approval.

Construction

Guards can be constructed by a framed mesh system or infilled with solid sheet metal, to suit the necessary application. Or either of our standard modular systems (Satech & Angel) can be utilised.

Interlocks

Electrical or mechanical interlocks can be provided to ensure access is only possible when the machine is in a safe condition.

Finish

Guards are polyester powder coated in a colour of your choice.
