

# CABLE TRUNKING

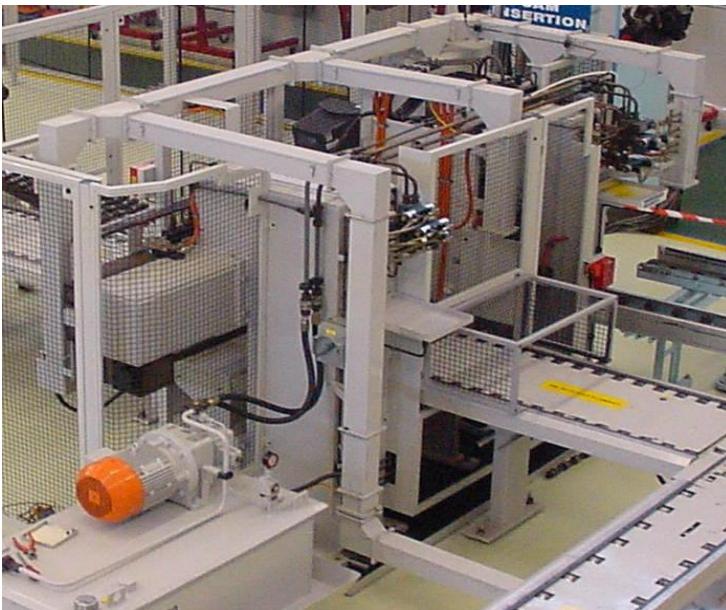

## Application

Design, manufacture and installation of modular Cable trunking systems to protect cables from dust or water ingress. Can be designed during a site visit or from CAD layouts.

## Construction

Trunking comes in 150mm, 200mm or 300mm wide sections with elbows and “T” sections to suit all configurations. All made from 2mm thick sheet metal. The system is designed to have a full “lay in” facility, so there is no need to feed through cables. All trunking is IP54 rated to guarantee protection against dust / water.

## Finish

All steelwork is polyester powder coated in a colour of your choice.
