

HANDRAILING & CRASH BARRIER

Application

Design and manufacture of hand railing to prevent falling from height or as a visible barrier around a hazardous area. All hand railing is designed in accordance with the relevant standards.

Construction

Hand railing is normally 1100mm high and constructed from 40 x 40 SHS with 150mm base plates. Stronger options are available if forklift trucks operate in the area, to act as a crash barrier.

Finish

Hand railing is galvanised and/or polyester powder coated in a colour of your choice
