

# STAINLESS STEEL GUARDS

## Application

Design and manufacture of Stainless steel fabricated guards, to prevent unauthorised access into a hazardous area for industries where cleanliness or rust prevention is essential. Guards are designed in compliance with BS EN953.

## Construction

Guards can be constructed from various types of tubular, angle, flat sections depending on the requirement. Guards can be infilled with a folded sheet panel, mesh or polycarbonate. Various grades and finishes of stainless steel are available.

## Interlocks

Electrical or mechanical interlocks can be provided to ensure access is only possible when the machine is in a safe condition.

## Finish

Self colour.
