

# PAPER MILL INDUSTRY GUARDING EXPERIENCE

## Requirement

Contact with heavy rolls or fast-moving webs carries a high risk of serious or fatal injuries. Older machines were built to safety standards far lower than today's, and some have been modified without adequate guarding.

## Full service

Machine surveys, risk assessments, standards-compliant design, manufacture and installation. We also update safety related control systems and connect new guard witches, light curtains and other safety devices.

## Construction

316 grade stainless steel or mild steel with a galvanised or polyester powder coated finish. Infills are wire mesh, sheet steel or clear polycarbonate.

## Experience and expertise

Over 70 years' experience manufacturing bespoke machine guards for paper mills throughout Europe and beyond.
